

Module 2 Activity 1: Import ArcPy

Purpose:

Access the ArcPy site package and run a geoprocessing tool.

Instructions:

Part 1

1. Add data from the BGIS data folder, or any other data of your choice, to a new Pro session
2. Open the Python Window
3. Use the ***import arcpy*** statement to access the ArcPy site package
4. Based on the data you have in your ArcMap session, choose a tool suitable for some simple analysis
5. Access the tool's help menu to find the Python syntax
6. Run the tool of your choosing

Part 2

1. Repeat the steps in **Part 1** using a standalone Python editing environment such as IDLE, PyScripter, Spyder or any other editing environment of your choosing
